Trinitas Medical Center Roof Rehabilitation/ Restoration Project, Elizabeth, NJ

The Medical Center project scope of work consisted of rehabilitating & restoring the roof system & the exterior of the elevator penthouse. The North Tower Building is approximately 133,000 SF and 120+ feet tall. The Hospital Building sits in north side of the campus in Elizabeth New Jersey for almost 60 years.

Hospital Environment, Roof leaks had to be minimized during construction, especially to the patient areas. A cut and replace method of the old roof areas making each work section watertight with a temporary seal by end of each work shift on a daily basis would be required to maintain water tightness during construction.
